

ASSIGNMENT - 8

Name : YADHU KRISHNA MK

Email : yadhu8824@gmail.com

Can we add any statements immediately below the break or continue?

No, you cannot add any statements immediately below the break or continue statement inside a loop. The break statement is used to exit the loop prematurely, and the continue statement is used to skip the rest of the current iteration and move to the next iteration of the loop. Any statements placed below these statements will become unreachable and will never be executed.

```
for (int i = 0; i < 10; i++) {  
    if (i == 5) {  
        System.out.println("Before break");  
        break;  
        System.out.println("After break"); // This will not be printed  
    }  
    System.out.println(i);  
}  
  
// Continue  
  
for (int j = 0; j < 10; j++) {  
    if (j % 2 == 0) {  
        System.out.println("Before continue");  
        continue;  
        System.out.println("After continue"); // This will not be printed  
    }  
    System.out.println(j);  
}
```
